

Edible Life Cycle of a Butterfly

Learn the four stages in the life cycle of a butterfly by placing yummy treats inside the dotted circles. Who knew science could be so tasty!

Egg

A butterfly starts life as a very small, round or oval egg. The egg shape depends on the type of the butterfly.

Mini Marshmallows

Gummy Worms

A pretzel for the body and peeled mandarin slices as wings

Butterfly

Finally, we have a butterfly! Usually within a three or four hour period, the butterfly will master flying!

Caterpillar

When the egg hatches a caterpillar emerges. Caterpillars do not stay in this stage for long, and all they do is eat!

Grapes

Chrysalis

As soon as the caterpillar has finished growing, they form themselves into a Chrysalis or Pupa. Inside the caterpillar is rapidly changing and waiting to break out from its cocoon.
